

String SubString and SubSequences problems:

' ' / a b c

either we do take it or ignore it

"abc", "ac", "bc", "a", "b", "c"

CODE:

Static ArrayList<String> (String ^{Processed}~~original~~, String up) {

if (up.isEmpty()) {

Print or adding in array list;

return; }

char ch = up.charAt(0);

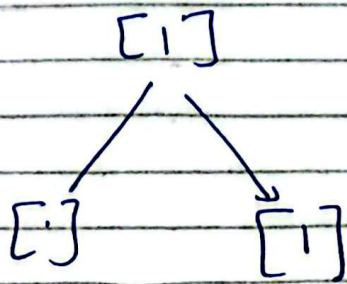

4 Now either we going to add the character
4 or ignore it.

subseq (p + ch, ^{up.}subString (1));

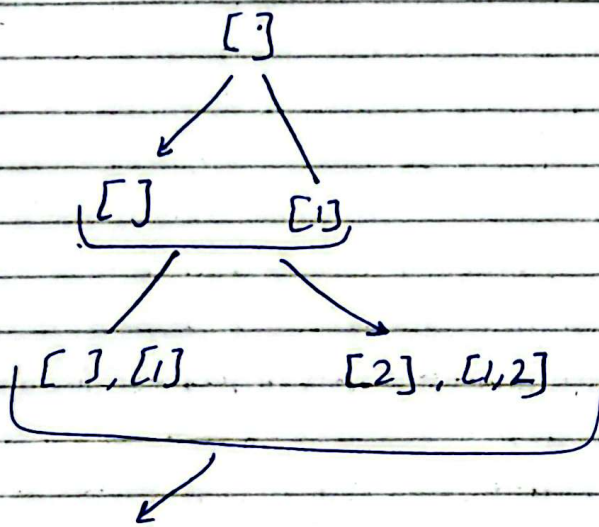

subseq (p, up.subString (1));

r.

}

like if we have [1,2,3]

[], [1], [2], [1,2], [3], [1,3], [2,3], [1,2,3]

first it is empty then every new coming element is added the new array
 so one original array is outside and we keep adding inside it.
